2. Project Description

2.1 Project Title

Aqari – Smart Real Estate Management Platform

2.2 General idea :

Aqari is an innovative real estate platform that simplifies the process of buying, selling, and renting properties. It offers an integrated system where users can search, list, review, and communicate in one secure space.

Key features include:

- Advanced property search filters
- Verified listings with high-quality photos
- Direct chat with agents or owners
- User reviews and neighborhood insights
- Real-time notifications for new listings

The platform aims to make property transactions faster, safer, and more transparent .

2.3 Targeted Users :

- ➔ **Buyers & Renters** : Individuals seeking verified property listings.
- ➔ **Property Owners & Real Estate Agents** : Users who manage and promote listings.
- ➔ **Real Estate Offices / Platform Admins** : Professionals ensuring data accuracy, trust, and compliance .

2.4 Main Problems to Solve:

1. Scattered and outdated property listings
2. Lack of reliable and verified information
3. Poor communication between users and agents
4. No proper review or rating systems
5. Absence of real-time notifications
6. Security and privacy concerns

3. User Research

3.1 Data Collection Methods

➔ Interviews

With

- agents
- buyers
- renters

➔ renters

using Google Forms to collect user feedback on challenges and desired features

3.2 How To Find Users

To find users for the **Aqari** real estate platform, outreach can be directed toward **individuals who buy, sell, or rent properties**, such as students, families, landlords, and real estate agents. These groups represent the main users who regularly interact with property listings and face challenges in current real estate applications.

Online **social media platforms** such as WhatsApp, Twitter (X), and Telegram will be used to share the questionnaire and reach potential participants. Additionally, **local real estate offices** can be contacted to gather input from professionals in the field.

This approach helps collect feedback from real users with real estate experience and provides deeper insight into their needs, behaviors, and expectations from a digital property management system.

3.3 Interview questions :

1. How do you currently search for or list properties when buying or renting?
2. What challenges do you face when using real estate apps or websites?
3. What information is most important to you when viewing a property listing?
4. Do you trust online property listings? Why or why not?
5. How helpful would instant notifications be when new properties match your preferences?
6. What one feature would make a real estate app like Aqari more useful for you?

Interview 1:

Interviewer: Raghad Almutairi

Date: 14/10/2025

Interviewee Name: Ehsan Al-Mutairi

Title: Senior law student

1. How do you currently search for or list properties when buying or renting?

I usually use real estate apps or websites to browse properties and compare prices.

2. What challenges do you face when using real estate apps or websites?

The main issue is that some listings aren't accurate — the photos or prices don't always match reality.

3. What information is most important to you when viewing a property listing?

I care most about the property's real photos, location accuracy, and honest reviews.

4. Do you trust online property listings? Why or why not?

Not completely. Some listings look too perfect, and I've seen cases where the details were outdated or exaggerated.

5. How helpful would instant notifications be when new properties match your preferences?

Very helpful, as long as the notifications are for verified and real properties.

6. What one feature would make a real estate app like Aqari more useful for you?

A verification system for listings and more reliable user reviews — that would make me trust the app more.

Interview Analysis :

The participant mainly uses real estate apps but struggles with trust issues due to inaccurate listings and unreliable reviews. They value authentic photos, correct details, and honest feedback, showing the need for more transparency.

They find instant notifications helpful only if the properties are verified, emphasizing that credibility is more important than quantity. Overall, they believe features like verified listings and trusted reviews would make an app like Aqari more reliable and useful.

Interview 2 :

Interviewer: Rmaas Badr

Date: 14/10/2025

Interviewee name: Faisal Alhazzani

Title: Marketing Manager at Real Estate Office

1. How do you currently search for or list properties when buying or renting?

I usually use real estate apps and sometimes visit agencies directly.

2. What challenges do you face when using real estate apps or websites?

Most apps don't show clear financing options or bank offers that fit my budget.

3. What information is most important to you when viewing a property listing?

I focus on price, payment plans, and loan options.

4. Do you trust online property listings? Why or why not?

Not completely. Prices sometimes change when I contact the seller or bank.

5. How helpful would instant notifications be when new properties match your preferences?

Very helpful, especially if they include updated financing deals.

6. What one feature would make a real estate app like Aqari more useful for you?

A bank comparison tool that shows the best financing offers for each property.

Interview Analysis :

The participant mainly struggles with financial limitations and the lack of clear bank financing options in current real estate apps. They prioritize price, payment plans, and loan details, showing that affordability is their main concern.

They also mentioned inconsistent pricing between listings and actual offers, which reduces their trust in online platforms. A key insight is that they want transparency and easier access to bank comparisons, suggesting that Aqari could improve by integrating real-time financing and loan offers.

Interview 3 :

Interviewer : Taif Almutairi

Date : 15/10/2025

Interviewee Name : Omar bin Salman

Title : CEO of a real estate office

1. How do you currently search for or list properties when buying or renting?

I mostly list and search through real estate apps and social media platforms like Instagram and Twitter.

2. What challenges do you face when using real estate apps or websites?

Some listings are outdated or duplicated, and there's not enough detail or clear contact information.

3. What information is most important to you when viewing a property listing?

Accurate price, location, property size, and real photos of the place.

4. Do you trust online property listings? Why or why not?

Not always because many listings are not verified or the information can be misleading.

5. How helpful would instant notifications be when new properties match your preferences?

Very helpful. It saves time and helps me contact clients or sellers faster before others do.

6. What one feature would make a real estate app like Aqari more useful for you?

A system that compares bank offers and calculates monthly payments directly for each property.

Interview Analysis :

The agent uses real estate apps and social media to post and find properties but complains about old or fake listings that waste time. He cares most about accurate prices, location, and real photos to attract serious buyers. Instant alerts would help him contact clients faster, and he suggests adding a feature to compare bank offers and payment plans to close deals more easily.

Raw Data Analysis:

Question 1:

How often do you use online platforms to search for properties?

Daily	15 (38.5%)
Rarely	11 (28.2%)
Monthly	9 (23.2%)
Weekly	2 (5.1%)
Never	2 (5.1%)

Raw Data Analysis:

Question 2 :

What are the most important factors for you when choosing a property app?

Ease of use	25 (64.1%)
Accurate and updated listings	24 (61.5%)
Security and privacy	24 (61.5%)
Direct contact with agents/owners	20 (51.3%)
Property reviews and ratings	16 (41.0%)
Notifications for new listings	10 (25.6%)

Raw Data Analysis:

Question 3 :

How likely are you to trust user reviews when selecting a property?

Somewhat likely	12 (30.8%)
Neutral	12 (30.8%)
Very likely	9 (23.1%)
Unlikely	4 (10.3%)
Never	2 (5.1%)

Raw Data Analysis:

Question 4 :

What communication method do you prefer when contacting property owners or agents?

Direct phone call	14 (35.9%)
WhatsApp or other messaging apps	13 (33.3%)
In-app chat	7 (17.9%)
Email	5 (12.8%)

3.5 Online Questionnaire:

Real Estate Experience Survey

This survey aims to gather feedback from people who buy, rent, or manage properties, to help us design a simple and efficient real estate app that makes searching and listing properties easier.

It's part of a Human-Computer Interaction (HCI) project focused on improving user experience in real estate applications.

It takes less than 2 minutes please answer honestly based on your real experience with property apps or websites.

4. Problem Insights & Proposed Solutions

4.1 Problem 1 : Difficulty Choosing the Right Mortgage Option

Insight:

Many users struggle to understand which bank offers the best financing option for their salary and budget. They often have to visit multiple bank websites or branches to compare offers, which is time-consuming and confusing. This highlights the need for a unified system that allows users to explore and compare bank offers easily in one place.

Need:

There is a need for a dedicated section that brings all banks together in one place, displaying each bank's interest rate, financing details, and eligibility requirements, while offering smooth and direct communication with the selected bank.

How the App Addresses the Problem:

The app provides a specialized section that displays all banks along with their interest rates, financing information, and eligibility requirements, allowing users to compare offers clearly and efficiently. It also enables seamless and direct communication with the selected bank, helping users access accurate information quickly and make confident, well-informed financing decisions.

Outcome:

The app makes it faster and easier for users to compare bank offers, communicate directly with banks, and choose the best financing option with confidence.

4.2 Problem 2 : Missing Timely Property Opportunities

Insight:

Many users spend excessive time repeatedly checking for new listings that fit their budget or preferences, and they often miss strong opportunities because those listings appear after their last visit. This indicates a clear need for a proactive, event-driven alert mechanism that surfaces relevant properties the moment they become available.

Need:

Users need real-time alerts when new, suitable properties (matching budget, location, type, etc.) are posted—so they can act immediately instead of manually re-checking.

How the App Addresses the Problem:

The application will provide a Smart Alerts & Notifications feature that:

- Lets users save filters (budget range, location, property type, bedrooms, amenities).
- Continuously monitors new listings against saved filters.
- Sends instant push notifications (and optional email) when a matching property is posted.
- Includes quick-action deep links that open the listing directly in the app.
- Supports snooze / digest modes (instant, hourly, daily) to avoid notification fatigue.

Outcome:

Users will stop missing property opportunities and can act immediately when suitable listings appear.

4.3 Problem 3 : Lack of Trust in Property Listings and Sellers

Insight:

Users often hesitate to trust a property or a seller when there are no reviews or ratings available. Without feedback from previous buyers or renters, it becomes difficult to judge the reliability of the seller or the quality of the property, which leads to uncertainty and hesitation during the decision-making process.

Need:

Users need a trust and feedback system that allows them to rate and review both properties and sellers based on real experiences.

How the App Addresses the Problem:

The application will include a Rating and Review System where users can:

- Leave feedback after renting, buying, or interacting with a seller
- View average ratings, detailed comments, and verified user history
- Identify trusted sellers and better-quality properties

Outcome:

Users will gain trust in listings and sellers, making the platform more reliable and transparent.

5. Low fidelity prototyping

5.1

➔ Splash Screen :

This is the main splash screen of the AQARI app, showcasing the app's identity in a clean and modern style. The circle element will be animated, adding a dynamic and smooth visual effect when the app starts.

5.2

➔ Login Screen

The Login Screen UI mockup features a header with a globe icon and the AQARI logo. Below the header, there are two input fields labeled "User name" and "Password". A link labeled "Forgot Password?" is positioned below the password field. At the bottom, there is a button labeled "New User Create Account". A blue arrow points from the bottom left towards the "New User Create Account" button.

The Login Screen allows users to securely access their personal accounts by entering their username and password, with quick options to reset a forgotten password or create a new account if they don't have one.

➔ Registration Screen

The Registration Screen enables new users to create an account by entering their personal information, such as name, phone number, email, and password, allowing them to easily access all app features once their account is set up.

The Registration Screen UI mockup features a header with a globe icon and the AQARI logo. Below the header, there are several input fields: "User name:", "First name:", "Last name:", "+966 Phone number", "Email:", "Password", "Confirm Password", and "Type of Income". A "Create" button is located at the bottom right. A blue arrow points from the top right towards the "Create" button.

5.3

➔ Main screen component

Language Icon : allows the user to switch the app's interface to their preferred language for easier and more personalized navigation.

Account Icon: allows the user to access their personal profile, view saved properties, and manage their account information easily.

Messages Icon: allows the user to communicate easily with sellers or banks through a built-in messaging system for faster and more convenient support.

Search Icon: allows the user to quickly search for specific properties using keywords, filters, or categories to find the most suitable results.

Properties Icon: takes the user to the main property listings, where they can browse available real estate options for buying, renting, or exploring projects.

Finance Icon: provides access to the financing section, where users can view loan options, compare bank offers, check interest rates, and easily communicate with banks for mortgage support.

5.4

Properties Icon

The Property Listings Screen displays all available property cards along with the main category tabs (Buy, Rent, and Projects), and includes both the Filter option for refining search results and the Map option that allows users to view properties based on their location.

The screen includes three main icons: Specifications for viewing all property details, Reviews for user opinions, and Financing for available loan options, along with secondary features such as Alerts for notifying the user about any updates or changes, Share for sending the property to others, and the 3D View feature that allows the user to explore the property more interactively.

5.5

When the alert is activated on the property page, the app automatically tracks any updates or new listings that match the user's selected criteria. Once a suitable property becomes available either from the same owner or a similar listing the system sends an immediate alert to ensure the user is notified instantly about the new opportunity.

Messages Icon

All these alerts and messages will appear inside the Messages Icon, allowing the user to view every update in one place as if it were a direct conversation with the property owner.

5.6

% Finance Icon

5.6

% Finance Icon

This screen displays a list of banks along with their essential financing information, allowing users to compare offers easily. The interest rate is the most important element on each bank card, as it helps users understand the cost of financing and choose the best option. Additional actions such as viewing financing details or contacting the bank are also available.

Summary :

The proposed design addresses the main challenges faced by users during their real-estate search by offering clear, simple, and easy-to-navigate interfaces that provide accurate information and support confident decision-making.

To solve the issue of choosing the right financing option, the design includes a dedicated section that presents banks in an organized way, showing interest rates, financing details, and eligibility requirements. It also introduces the general idea of helping users better understand and compare available options in one place, without needing to switch between multiple sources.

The design also solves the problem of missing good property opportunities through an instant notification system based on user preferences. Users receive alerts as soon as a property that matches their criteria becomes available, reducing wasted time and ensuring that no suitable opportunity is overlooked.

To address the lack of trust in property listings, the design incorporates a reliable rating and review system that allows users to view real feedback and previous experiences. Additionally, the built-in messaging feature enables direct communication with sellers and agencies, enhancing transparency and increasing trust in the platform.

Overall, the design demonstrates how these problems and needs are transformed into practical and effective solutions, making the property-search experience more reliable, transparent, and user-friendly.

6. High fidelity prototyping

6.1 Sign-in Page :

The Splash Screen displays the application's identity and the AQARI logo in a simple and elegant manner. It provides the user with a professional first impression before entering the application.

A quick interface for logging into the account using the username/email and password, with an option to create a new account for new users.

A dedicated page for filling in essential information such as the name, mobile number, email, password, and income type, to start using the application's services.

6.2 Main Page Components :

Language Selection:
An initial screen that allows the user to select the preferred display language (Arabic or English) before accessing the application content.

Edit Profile & Logout:
A dedicated account management page where the user can view and edit their personal information (such as name, password, and income type), along with the option to Logout from the application.

This screen lets users filter their property search by price, type, bedrooms, distance, and rating. The Apply button updates the results, while Reset clears all filters.

This screen displays property search results in Jeddah, showing area prices on the map and listing property details below. Users can browse options, view details, and navigate the app using the bottom menu.

6.3–6.4 Main Page :

These screens show the main listings section, where users can switch between Buy, Rent, and Projects. Each tab displays property listings with images, distance, rating, and price, and users can view more details through the Offer Details button while navigating the app using the bottom menu.

Specifications show the property's essential data (area, rooms, features).

Ratings show user experiences and feedback to build trust and inform decisions.

Financing displays the property price and allows comparing bank offers and interest rates.

Here is the alert button for unavailable properties.

6.5 Financing Page :

The "Bank Financing" interface allows the user to compare the offers from collaborating banks. It clearly displays the bank names and interest rates, making it easy to select the best financing that suits their needs.

6.5 Financing Page :

The image displays three mobile app screens for the 'Installment Calculator' interface.

Screen 1 (Main Menu): Shows the AQARI logo and three main options: 'Bank Financing', 'Bank Calculator' (highlighted in blue), and 'Finance Request'.

Screen 2 (Form Input): Titled 'Installment Calculator', it shows a user profile for 'Ahmed' and a welcome message. The form includes three input sections: 'Monthly Salary' (with a text input field), 'Property Price' (with a text input field), and 'Repayment Period' (with radio buttons for 6 months, 12 months, 24 months, and 36 months). Below the form are three buttons: 'Reset', 'Help', and 'Calculate Installment'.

Screen 3 (Result): Shows the same form with the 'Calculate Installment' button highlighted in blue. Below the form, the 'Estimated Monthly Installment' is displayed as '1,200 SR' with a '+5%' note.

The "Installment Calculator" interface allows the user to estimate their expected monthly installment. It requires entering the Salary, Property Price, and Repayment Period, and then displays the monthly installment value for a quick financial assessment.

6.5 Financing Page :

The "Finance Request" interface allows the user to submit a personal financing request by filling in the loan amount and purpose. It displays the nearest banks and their interest rates for comparison, and enables tracking of the request status (pending or approved).

6.6 Message Page :

The "Messaging" section allows the user to message the property owner or bank representative directly, facilitating quick communication and procedure finalization.

The Real Estate Agent Profile is a key interface for trust and communication, accessible from the property details page or the private messaging section. The profile displays Trust Metrics, Client Reviews, and offers direct communication options (Send Message), in addition to the Follow feature to view all the agent's future listings.

6.7 Search Page :

The "Search" section allows the user to specify the location or property type, with facilitators like displaying Popular Areas and the "Favorites" option for quick access to saved properties.

7. Summary & Conclusion

Summary :

At the beginning of the project, we identified several major issues that users face in real estate platforms, such as inaccurate and outdated property listings, weak communication between buyers and agents, and the difficulty of comparing mortgage options. These problems caused confusion, reduced trust, and made the property-search process slower and less reliable.

Through interviews and online surveys, we gathered clear insights from buyers, renters, agents, and property owners. Their feedback highlighted the need for accurate information, faster updates, trustworthy reviews, and easier access to financial details. This user research helped us understand the real challenges and guided our design decisions.

To solve these issues, we designed Aqari with features that directly address user needs. We added verified listings and a full rating system to build trust, introduced smart notifications to prevent users from missing new property opportunities, and created a financing section that allows users to compare bank offers, calculate installments, and contact banks directly.

We then enhanced the overall user experience by building simple, intuitive interfaces and adding an in-app messaging system that improves communication. By transforming real user problems into effective solutions, Aqari delivers a more efficient, transparent, and trustworthy real estate platform.
